Quote Request Sequence	Rental Return Sequence	

System Architecture Overview

High-level overview of the Swiftflitz system components, showing the relationship between frontend, backend, services, data layer, and external integrations.

Customer Booking Flow

End-to-end flow for customers browsing vehicles and making bookings or requesting quotes on the public website.

Rental Status Lifecycle

STATE DIAGRAM

State machine showing all possible rental statuses and the transitions between them throughout the rental lifecycle.

Vehicle Return & Approval Flow

FLOW DIAGRAM

Detailed process flow for handling vehicle returns, including inspection, damage assessment, charge calculation, and final approval.

Admin Rental Management Flow

FLOW DIAGRAM

Complete admin workflow for managing rentals from creation through pickup, return, and completion.

Direct Booking Sequence

SEQUENCE DIAGRAM

Sequence of interactions between customer, website, server, database, and notification services during a direct booking.

Quote Request Sequence

SEQUENCE DIAGRAM

Sequence of interactions when a customer requests a quote for a non-priced vehicle.

Rental Return Sequence

SEQUENCE DIAGRAM

Detailed sequence of operations when processing a vehicle return in the admin panel.
